

Falcon Refinery Site Team:

Team Members: Gary Moore, Rafael Casanova, Gloria Moran, Kenneth Talton

This team entered into two Administrative Orders on Consent (AOCs) with the owner of the property to conduct and finance both a Removal Action and Remedial Investigation and Feasibility Study (RI/FS) at an abandoned refinery in Ingleside, San Patricio County, Texas. The Removal Action will be conducted to remove the source materials from tanks, equipment, and piping while the RI/FS will focus on the longer-term environmental issues associated with the Site. In addition, this site is the first in the Region to be settled in accordance with the Superfund Alternative Sites policy where the NPL listing is suspended to avoid the negative images connected with a listed Superfund Site. As provided in the Superfund Alternative Sites policy, the Potentially Responsible Party entered into an AOC to conduct an RI/FS which is equivalent to an RI/FS that is required at NPL sites.
